DETAILED ACTION

Claims 1-15, 18-34 and 36-64 are pending in the present application. The examiner thanks Mercedes Myer for pointing out that the prior restriction was drawn to the originally filed claims and not the currently pending claims. The instant restriction is drawn to the above claims.

Election/Restrictions

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, drawn to a promoter for the expression of recombinant proteins in filamentous fungi.

Group II, claim(s) 6-10, drawn to a DNA sequence encoding glutamate dehydrogenase protein.

Group III, claim(s) 11-15, drawn to a glutamate dehydrogenase protein.

Group IV, claim(s) 18-28, 34-38, 49-59, 61-62 and 64, drawn to a DNA construct and method of using said construct for expressing a recombinant protein in filamentous fungi.

Group V, claim(s) 29-32, 39-48, 60 and 63, drawn to a filamentous fungus culture.

Group VI, claim(s) 35, drawn to a method of using DNA as a probe.

Art Unit: 1636

The inventions listed as Groups I, II, III, IV, V and VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The instant groups fail to have unity of inventions because they fail to:

- (1) A product and a process specially adapted for the manufacture of said product; or
- (2) A product and process of use of said product; or
- (3) A product, a process specially adapted for the manufacture of the said product, and a use of the said product; or
- (4) A process and an apparatus or means specifically designed for carrying out the said process; or
- (5) A product, a process specially adapted for the manufacture of the said product, and an apparatus or means specifically designed for carrying out the said process. See 37 C.F.R. 1.475.

Applicant is referred to WO 98/9459, on applicant's IDS, which shows that glutamate dehydrogenase promoters, as in Group I, are known and can be used in constructs for expressing recombinant proteins in filamentous fungi host cells. Moreover, Gibco Catalog 1993-1994 disclose oligo(dT) which hybridizes to nucleic acids 141 through 149 also satisfy the limitations of claim 1. Thus, the products and methods of the above groups are not unique or novel such that a special technical feature connecting the groups is found. For the foregoing reasons, the present Groups fail to define a contribution which each of the claimed inventions as a whole make over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1636

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
